

WHAT IS CLAIMED IS:

1. A motor vehicle with devices for holding objects and accessories, comprising:
 - at least one multifunctional holder placed in or attached to the motor vehicle; and
 - at least one device with at least one additional function mounted detachably to the at least one multifunctional holder.
2. The motor vehicle according to claim 1, wherein the multifunctional holder is placed in an interior space of one of the motor vehicle, an engine compartment, and a trunk.
3. The motor vehicle according to claim 1, wherein the multifunctional holder is provided in an interior space of the motor vehicle at one of a center console, a dashboard, a side molding of a door or lateral wall, and a back of a seat and wherein the multifunctional holder is concealed as an insert in a hollow space or openly visible at an outer surface.
4. The motor vehicle according to claim 1, wherein the at least one device is a holder for at least one of a container, such as a beverage cup, a case for glasses, glasses, writing utensils, coins, and cigarettes.
5. The motor vehicle according to claim 1, wherein the at least one device includes at least one electrical connection for electrically operated equipment that is held by the at least one device.

6. The motor vehicle according to claim 5, wherein the electrically operated equipment is one of a laptop, palmtop, recording system, reproducing system, mobile phone, and reading lamp.

7. The motor vehicle according to claim 1, wherein audio equipment, an ashtray, or a garbage container is held in the at least one device.

8. A motor vehicle holding device, comprising:
a multifunctional holder associated with an interior of the motor vehicle; and

a plurality of holding devices, wherein each of said plurality of holding devices has a physical structure different from each of the other of the plurality of holding devices and wherein the plurality of holding devices are interchangeably attachable to the multifunctional holder.

9. The motor vehicle holding device of claim 8, wherein the multifunctional holder is attached to an exterior surface of the interior of the motor vehicle.

10. The motor vehicle holding device of claim 8, wherein the multifunctional holder is integrated within a structure in the interior of the motor vehicle.

11. The motor vehicle holding device of claim 8, wherein each of the plurality of holding devices includes a mounting section that is detachably connectable to the multifunctional holder.

12. The motor vehicle holding device of claim 11, wherein the mounting sections are detachably connectable to an exterior surface of the multifunctional holder.

13. The motor vehicle holding device of claim 11, wherein the mounting sections are detachably connectable within an interior of the multifunctional holder.

14. A method for holding a device in a motor vehicle, comprising the steps of:

placing a multifunctional holder within an interior of the motor vehicle;

attaching one of a plurality of holding devices to the multifunctional holder, wherein each of the plurality of holding devices is configured to hold a device with a function that is different from each other device; and

placing a respective device with a function into the one of the plurality holding devices attached to the multifunctional holder.

15. The method of claim 14, further comprising the steps of:

detaching the one of the plurality of holding devices from the multifunctional holder;

attaching a second of the plurality of holding devices to the multifunctional holder; and

placing a second respective device with a second function into the second of the plurality of holding devices.

16. The method of claim 14, wherein the step of attaching one of the plurality of holding devices to the multifunctional holder includes the step of inserting a mounting section of the one of the plurality of holding devices into the multifunctional holder.

17. The method of claim 14, wherein the step of attaching one of the plurality of holding devices to the multifunctional holder includes the step of mechanically connecting a mounting section of the one of the plurality of holding devices to the multifunctional holder.

18. The method of claim 14, further comprising the steps of electrically connecting the one of the plurality of holding devices to the multifunctional holder and electrically connecting the respective device to the one of the plurality of holding devices.

19. The method of claim 14, wherein the step of placing the multifunctional holder within the interior of the motor vehicle includes the step of attaching the multifunctional holder to an exterior surface of the interior of the motor vehicle.

20. The method of claim 14, wherein the step of placing the multifunctional holder within the interior of the motor vehicle includes the step of integrating the multifunctional holder within a structure in the interior of the motor vehicle.
